The creators of the Hardy-Weinberg equilibrium -made by British mathematician Godfrey Hardy and German physician Wilhelm Weinberg -in 1908, Hardy and Weinberg showed that genotype frequencies in a population stay the same over time as long as certain conditions are met. -They also showed that these frequencies can be predicted.

114 Hardy Weinberg Equilibrium Study Guide Answer Key

One of the most important principles of population genetics, the study of the genetic composition of and differences in populations, is the Hardy-Weinberg equilibrium principle. Also described as genetic equilibrium , this principle gives the genetic parameters for a population that is not evolving.

I have a set of 10 genes, each gene contains around 15 SNPs. I have tested the deviation from Hardy Weinberg equilibrium (HWE) for all SNPs. All of the SNPs didn't deviate from HWE, except 5 SNPs in ABCG8, they had $p < 0.05$. I have found different factors that can affect the HWE.

114 Hardy Weinberg Equilibrium Study Guide Answer Key

In a case-control association study, deviation from Hardy-Weinberg equilibrium (HWE) or Hardy-Weinberg dis-equilibrium (HWD) in the control group is usually considered as evidence for potential genotyping error, and the corresponding SNP is then removed from the study. On the other hand, assuming HWE holds in the study population, a truly associated SNP is expected to be out of HWE in the case ...

When populations are in the Hardy-Weinberg equilibrium, the allelic frequency is stable from generation to generation and the genotype frequencies match the Hardy-Weinberg proportions. If the allelic frequency measured in the field differs from the predicted value, scientists can make inferences about what evolutionary forces are at play.
