Solving

Solving Systems Of

To solve a system is to find all such common solutions or points of intersection. Systems of linear equations are a common and applicable subset of systems of equations. In the case of two variables, these systems can be thought of as lines drawn in two-dimensional space.

Solving

Systems of Equations

Solver: Wolfram|Alpha

Let 's solve a couple of examples using

substitution method.

Example 1. Solve the systems of equations

below. $b = a + 2$. $a + b =$

4. Solution. Substitute the

value of b into the second equation. $a + (a + 2) = 4$.

Now solve for a . $a + a + 2$

$= 4$. $2a + 2 = 4$. $2a = 4 -$

2 . $a = 2/2 = 1$. Substitute

Solving

Solve systems of equations by graphing and identifying the point of intersection. We have solved problems like $3x - 4 = 11$ by adding 4 to both sides and then dividing by 3 (solution is $x = 5$). We also have methods to solve equations with more than one variable in them.
