The story of the company that was founded by the inventor of the snowmobile In 1942, Joseph-Armand Bombardier invented the snowmobile and founded his company to manufacture them. From its humble beginnings as an entrepreneurial company in rural Quebec, led by an enterprising inventor, Bombardier Inc. has emerged as a global leader in the transportation industry. This book tells the fascinating tale of this remarkably well managed company that has enjoyed spectacular growth in its chosen markets through strong leadership and management strategy, succession planning, strategic diversification, and turnaround and acquisition artistry. The fascinating story of the world's largest rail manufacturer for both railway and subway Reveals why Bombardier Inc. is a multi-faceted global company yet nobody knows their name Written by Larry MacDonald the author of Nortel Network The Bombardier Story shows how invention and entrepreneurship, management and leadership, smooth succession planning, and turnaround and acquisition built this global powerhouse.

Artificial Intelligence Techniques in Prolog introduces the reader to the use of well-established algorithmic techniques in the field of artificial intelligence (AI), with Prolog as the implementation language. The techniques considered cover general areas such as search, rule-based systems, and truth maintenance, as well as constraint satisfaction and uncertainty management. Specific application domains such as temporal reasoning, machine learning, and natural language are also discussed. Comprised of 10 chapters, this book begins with an overview of Prolog, paying particular attention to Prolog terms and rules (and Prolog facts as special cases); unification; the and-or computation tree induced by a Prolog program and a query; the depth-first, left-to-right traversal of that tree by the standard Prolog interpreter; and built-in predicates such as unification and equality. Subsequent chapters deal with search and representation of graphs in Prolog; backward-chaining methods; truth

maintenance systems; and constraint satisfaction. Reasoning with uncertainty, planning and temporal reasoning, and machine learning are also tackled. The book concludes with an assessment of natural language processing and some of the linguistic notions that are easily encoded in Prolog. This monograph will be of interest to both students and practitioners in the fields of AI and computer science.

With the ever-increasing incidence of harmful cyanobacterial algal blooms, this monograph has added urgency and will be essential reading for all sorts of researchers, from neuroscientists to cancer research specialists. The volume contains the proceedings of the 2005 International Symposium on Cyanobacterial Harmful Algal Blooms, and has been edited by H. Kenneth Hudnell, of the US Environmental Protection Agency. It contains much of the most recent research into the subject.

One day in the early spring, Alice Winter came home from school, and, after the usual question at the door, "Is mamma at home?" rushed upstairs, and found to her great surprise that her papa was at home, talking very earnestly to Mrs. Winter. When Alice came into the room, Mr. Winter stopped talking, and she wondered very much what they could have been talking about so earnestly, as all she heard was her papa asking, "Do you think we had better take her with us?" "Why, papa! What is the matter? Are you

going away? Are you sick? What made you come home so early?" were the questions which Alice gave rapidly, without waiting for an answer. Mr. Winter said, "Yes, dear, I am obliged to go to Nuremberg, Germany, on business immediately, and mamma is trying to make up her mind whether it is best for her to go with me. She does not like to leave you for so long a time, and we do not think it wise to take you with us, when you are getting on at school so nicely."

Engine-tuning expert A. Graham Bell steers you through the various modifications that can be made to coax maximum useable power output and mechanical reliability from your two-stroke. Fully revised with the latest information on all areas of engine operation, from air and fuel, through carburation, ignition, cylinders, porting, reed and rotary valves, and exhaust systems to cooling and lubrication, dyno tuning and gearing.
