The Manual factor mode allows you to define a fixed response factor to be used when calculating  
amounts and concentrations for that peak. The Reference mode, you can specify a reference compound  
(which would already be calibrated) and that reference compound's calibration data will be used when  
generating results for the uncalibrated peak.

My first recommendation would be to run the Software Verification Tool to qualify the installation of  
the OpenLab ChemStation application. This will tell you whether there are any missing or potential  
corrupt ChemStation files. You should be able to find the Software Verification Tool from the Windows  
Start menu in the Agilent Technologies folder.
