Nobody wants to fail. But in highly complex organizations, success can happen only when we confront our mistakes, learn from our own version of a black box, and create a climate where it's safe to fail. We all have to endure failure from time to time, whether it's underperforming at a job interview, flunking an exam, or losing a pickup basketball game. But for people working in safety-critical industries, getting it wrong can have deadly consequences. Consider the shocking fact that preventable medical error is the third-biggest killer in the United States, causing more than 400,000

Online Library Black Box Thinking Why Most People Never Learn From Their

deaths every year. More people die from mistakes made by doctors and hospitals than from traffic accidents. And most of those mistakes are never made public, because of malpractice settlements with nondisclosure clauses. For a dramatically different approach to failure, look at aviation. Every passenger aircraft in the world is equipped with an almost indestructible black box. Whenever there's any sort of mishap, major or minor, the box is opened, the data is analyzed, and experts figure out exactly what went wrong. Then the facts are published and procedures are changed, so that the same mistakes won't happen again. By applying this method in recent decades, the industry has created an astonishingly good safety record. Few of us put lives at risk in our daily work as surgeons and pilots do, but we all have a

Online Library Black Box Thinking Why Most People Never Learn From Their

strong interest in avoiding predictable and preventable errors. So why don't we all embrace the aviation approach to failure rather than the health-care approach? As Matthew Syed shows in this eye-opening book, the answer is rooted in human psychology and organizational culture. Syed argues that the most important determinant of success in any field is an acknowledgment of failure and a willingness to engage with it. Yet most of us are stuck in a relationship with failure that impedes progress, halts innovation, and damages our careers and personal lives. We rarely acknowledge or learn from failure--even though we often claim the opposite. We think we have 20/20 hindsight, but our vision is usually fuzzy. Syed draws on a wide range of sources--from anthropology and psychology to history and complexity theory--to explore

Online Library Black Box Thinking Why Most People Never Learn From Their

the subtle but predictable patterns of human error and our defensive responses to error. He also shares fascinating stories of individuals and organizations that have successfully embraced a black box approach to improvement, such as David Beckham, the Mercedes F1 team, and Dropbox. From the Hardcover edition.

"The pursuit of science by professional scientists every day bears less and less resemblance to the perception of science by the general public. It is not the rule-based, methodical system for accumulating facts that dominates the public view. Rather it is the idiosyncratic, often bumbling search for understanding in mostly uncharted places. It is full of wrong turns, cul-de-sacs, mistaken identities, false findings, errors of fact and judgment-and the occasional remarkable success. The widespread but distorted view of science as infallible originates in an education system that teaches nothing but facts using very large, very frightening textbooks, and is spread by media that report on discoveries but almost never on process. It is further reinforced by politicians who pay for it

Online Library Black Box Thinking Why Most People Never Learn From Their

and want to use it to determine policy and therefore want it right and, worst of all, sometimes by scientists who learn early on that talking too much about failures and not enough about successes can harm their careers. Failure, then, is a book that seeks to make science more appealing by exposing its faults. In this sequel to Ignorance, Stuart Firestein shows us that scientific enterprise is riddled with failures, and that this is not only necessary but good. Failure reveals how science got its start, when humans began to use a process-trial and error-as a kind of recipe that includes a hefty dose of failure. It gives the non-scientifically trained public an insider's view of how science is actually done, with the aim of making it accessible, comprehensible, and entertaining."--Publisher description.

It's an all too common scenario. A great company breaks from the pack; the analysts are in love; the smiling CEO appears on the cover of Fortune. Two years later, the company is in flames, the pension plan is bleeding, the stock is worthless. What goes wrong in these cases? Usually it seems that top management made some incredibly stupid mistakes. But the people responsible are almost always remarkably intelligent and usually have terrific track records. Just as puzzling as the fact that brilliant managers can make bad mistakes is the way they so often magnify the damage. Once a company has made a serious mis-step, it often seems as though it can't do anything right. How does this happen? Instead of rectifying their mistakes, why do business leaders regularly make them worse? To answer these questions,

Online Library Black Box Thinking Why Most People Never Learn From Their

Sydney Finkelstein has carried out the largest research project ever devoted to corporate mistakes and failures. In **WHY SMART EXECUTIVES FAIL**, he and his research team uncover-with startling clarity and unassailable documentation-the causes regularly responsible for major business breakdowns. He relates the stories of great business disasters and demonstrates that there are specific, identifiable ways in which many businesses regularly make themselves vulnerable to failure. The result is a truly indispensable, practical, must-read book that explains the mechanics of business failure, how to avoid them, and what to do if they happen.

From the bestselling, award-winning author of *You Are*

Online Library Black Box Thinking Why Most People Never Learn From Their

Awesome comes the much-anticipated follow-up, Dare to Be You. What would you dare to try if you stopped worrying about fitting in? If you're the kind of person who thinks: I don't like standing out from the crowd ... I wish I could be more like the cool kids ... There's no point trying to change things ... then this book is for you. Because guess what? There's no such thing as normal. Drawing examples from sport, science and even business, Dare to Be You empowers young readers to follow their own path, love what makes them different and question the world around them. With You Are Awesome's trademark mix of hilarious text, stylish illustration, personal insights and inspiring real-life examples, including Greta Thunberg and Malala Yousafzai, Matthew Syed introduces children to the power of diverse thinking. When you stop

Brilliantly practical with a wide variety of examples that make it relevant for both boys and girls (and adults)!" - Online customer review "Genuinely funny and engaging ... It's a must read." - Online customer review

Alastair Campbell knows all about winning. As Tony Blair's chief spokesman and strategist he helped guide his party to

Online Library Black Box Thinking Why Most People Never Learn From Their

victory in three successive elections, and he's fascinated by what it takes to succeed How do sportsmen excel, entrepreneurs thrive, or individuals achieve the ambitions? Is their ability to win innate? Or is the winning mindset something we can all develop? In the tradition of *The Talent Code* and *The Power of Habit*, Campbell draws on the wisdom of an astonishing array of talented people—from elite athletes to media mavens, from rulers of countries to rulers of global business empires. Alastair Campbell has conducted in-depth interviews and uses his own experience in politics and sport to get to the heart of success. He examines how winners tick. He considers how they build great teams. He analyzes how these people deal with unexpected setbacks and new challenges. He judges what the very different worlds

Online Library Black Box Thinking Why Most People Never Learn From Their

of politics, business, and sport can learn from one another. And he sets out a blueprint for winning that we can all follow to achieve our goals.
