Steam Generation from Biomass: Construction and Design of Large Boilers provides in-depth coverage of steam generator engineering for biomass combustion. It presents the design process and the necessary information needed for an understanding of not only the function of different components of a steam generator, but also what design choices have been made. Professor Vakkilainen explores each particular aspect of steam generator design from the point-of-view of pressure part design, mechanical design, layout design, process design, performance optimization, and cost optimization. Topics such as fuels and their emissions, steam-water circulation, auxiliary equipment, availability and reliability, measurements and control, manufacture, erection, and inspection are covered. Special attention is given to recovery boilers and fluidized bed boilers, and automated design and dimensioning calculation spreadsheets are available for download at the book 's companion website. This book is intended for both design engineers and steam boiler operators, as well as those involved in plant management and equipment purchasing. Provides a complete overview of biomass steam boilers, including processes, phenomena, and nomenclature Presents a clear view of how biomass boilers differ from fossil fuel boilers Covers the most used types of large-scale biomass boilers, including recovery boilers, fluidized bed boilers, and auxiliary equipment Includes a companion website with spreadsheets, calculation examples, and automatic calculation tools for design and dimensioning

Energy Efficiency: Concepts and Calculations is the first book of its kind to provide an applied, systems oriented description of energy intensity and efficiency in modern economies across the entire energy chain. With an emphasis on analysis, specifically energy flow analysis, lifecycle energy accounting, economic analysis, technology evaluation, and policies/strategies for adopting high energy efficiency standards, the book provides a comprehensive understanding of the concepts, tools and methodologies for studying and modeling macro-level energy flows through, and within, key economic sectors (electric power, industrial, commercial, residential and transportation). Providing a technical discussion of the application of common methodologies (e.g. cost-benefit analysis and lifecycle assessment), each chapter contains figures, charts and examples from each sector, including the policies that have been put in place to promote and incentivize the adoption of energy efficient technologies. Contains models and tools to analyze each stage at the macro-level by tracking energy consumption and how the resulting data might change energy use Includes accessible references and a glossary of common terms at the end of each chapter Provides diagnostic figures, tables and schematics within the context of local, regional and national energy consumption and utilization

Ehrman and Plese present a rare compilation of over 40 ancient gospel texts and textual fragments that do not appear in the New Testament.

HANDBOOK OF IMPROVING PERFORMANCE IN THE WORKPLACE Volume 3: Measurement and Evaluation Volume Three of the Handbook of Improving Performance in the Workplace focuses on Measurement and Evaluation and represents an invaluable addition to the literature that supports the field and practice of Instructional Systems Design. With contributions from leading national scholars and practitioners, this volume is filled with information on time-tested theories, leading-edge research, developments, and applications and provides a comprehensive review of the most pertinent information available on critical topics, including: Measuring and Evaluating Learning and Performance, Designing Evaluation, Qualitative and Quantitative Performance Measurements, Evidence-based Performance Measurements, Analyzing Data, Planning Performance Measurement and Evaluation, Strategies for Implementation, Business Evaluation Strategy, Measurement and Evaluation in Non-Profit Sectors, among many others. It also contains illustrative case studies and performance support tools. Sponsored by International Society for Performance Improvement (ISPI), the Handbook of Improving Performance in the Workplace, three-volume reference, covers three core areas of interest including Instructional Design and Training Delivery, Selecting and Implementing Performance Interventions, and Measurement and Evaluation.

A comprehensive treatment of the skills and techniques needed for visual psychophysics, from basic tools to sophisticated data analysis. Vision is one of the most active areas in biomedical research, and visual psychophysical techniques are a foundational methodology for this research enterprise. Visual psychophysics, which studies the relationship between the physical world and human behavior, is a classical field of study that has widespread applications in modern vision science. Bridging the gap between theory and practice, this textbook provides a comprehensive treatment of visual psychophysics, teaching not only basic techniques but also sophisticated data analysis methodologies and theoretical approaches. It begins with practical information about setting up a vision lab and goes on to discuss the creation, manipulation, and display of visual images; timing and integration of displays with measurements of brain activities and other relevant techniques; experimental designs; estimation of behavioral functions; and examples of psychophysics in applied and clinical settings. The book's treatment of experimental designs presents the most commonly used psychophysical paradigms, theory-driven psychophysical experiments, and the analysis of these procedures in a signal-detection theory framework. The book discusses the theoretical underpinnings of data analysis and scientific interpretation, presenting data analysis techniques that include model fitting, model comparison, and a general framework for optimized adaptive testing methods. It includes many sample programs in Matlab with functions from Psychtoolbox, a free toolbox for real-time experimental control. Once students and researchers have mastered the material in this book, they will have the skills to apply visual psychophysics to cutting-edge vision science.

Jeremy Clarkson gets under the bonnet in Clarkson on Cars - a collection of his motoring journalism. Jeremy Clarkson has been driving cars, writing about them and occasionally voicing his opinions on the BBC's Top Gear for twenty years. No one in the business is taller. In this collection of classic Clarkson, stretching back to the mid-1980s, he's pulled together the car columns and stories with which he made his name. As coal mines closed and house prices exploded to a soundtrack of men in make-up playing synthesizers, Jeremy was already waxing lyrical on topics as useful and diverse as: " The perils of bicycle ownership " Why Australians - not Brits - need bull bars " Why soon only geriatrics will be driving BMWs " The difficulty of deciding on the best car for your wedding " Why Jesus's dad would have owned a Nissan Bluebird " And why it is that bus lanes cause traffic jams Irreverent, damn funny and offensive to almost everyone, this is writing with its foot to the floor, the brake lines cut and the speed limit smashed to smithereens. Sit back and enjoy the ride. Praise for Jeremy Clarkson: 'Brilliant . . . laugh-out-loud' Daily Telegraph 'Outrageously funny . . . will have you in stitches' Time Out 'Very funny . . . I cracked up laughing on the tube' Evening Standard

OG Kush. Sour Diesel. Wax, shatter, and vapes. Marijuana has come a long way since its seedy days in the back parking lots of our culture. So has Howard S. Becker, the eminent sociologist, jazz musician, expert on " deviant " culture, and founding NORML board member. When he published Becoming a Marihuana User more than sixty years ago, hardly anyone paid attention—because few people smoked pot. Decades of Cheech and Chong films, Grateful Dead shows, and Cannabis Cups later, and it 's clear—marijuana isn 't just an established commodity, it 's an entire culture. And that 's just the thing—Becker totally called it: pot has everything to do with culture. It 's not a blight on culture, but a culture itself—in fact, you ' ll see in this book the first use of the term " users," rather than " abusers " or " addicts." Come along on this short little study—now a famous timestamp in weed studies—and you will be astonished at how relevant it is to us today. Becker doesn 't judge, but neither does he holler for legalization, tell you how to grow it in a hollowed-out dresser, or anything else like that for which there are plenty of other books you can buy. Instead, he looks at marijuana with a clear sociological lens—as a substance that some people enjoy, and that some others have decided none of us should. From there he asks: so how do people decide to get high, and what kind of experience do they have as a result of being part of the marijuana world? What he discovers will bother some, especially those who proselytize the irrefutably stunning effects of the latest strain: chemistry isn 't everything—the important thing about pot is how we interact with it. We learn to be high. We learn to like it. And from there, we teach others, passing the pipe in a circle that begins to resemble a bona fide community, defined by shared norms, values, and definitions just like any other community. All throughout this book, you ' ll see the intimate moments when this transformation takes place. You ' ll see people doing it for the first time and those with considerable experience. You ' ll see the early signs of the truths that have come to define the marijuana experience: that you probably won 't get high at first, that you have to hold the hit in, and that there are other people here who are going to smoke that, too.

Pounder 's Marine Diesel Engines and Gas Turbines, Tenth Edition, gives engineering cadets, marine engineers, ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future. This new edition introduces new engine models that will be most commonly installed in ships over the next decade, as well as the latest legislation and pollutant emissions procedures. Since publication of the last edition in 2009, a number of emission control areas (ECAs) have been established by the International Maritime Organization (IMO) in which exhaust emissions are subject to even more stringent controls. In addition, there are now rules that affect new ships and their emission of CO2 measured as a product of cargo carried. Provides the latest emission control technologies, such as SCR and water scrubbers Contains complete updates of legislation and pollutant emission procedures Includes the latest emission control technologies and expands upon remote monitoring and control of engines

In Foley Is Good, Mick Foley -- former Commissioner of the World Wrestling Federation, aka Cactus Jack, Dude Love, and Mankind -- picks up right where his smash #1 New York Times bestseller Have a Nice Day! left off, giving readers an inside look at the behind-the-scenes action in the Federation. With total honesty and riotous humor, Mick Foley shines a spotlight into some of the hidden corners of the World Wrestling Federation. From the ongoing controversy surrounding "backyard wrestling" to the real story behind his now-infamous "I Quit" match with The Rock, Foley covers all the bases in this hysterically funny roller-coaster ride of a memoir.
