In an age of uncertainties influenced by information technologies and the networking of societies, the maritime domain remains the main global lane of communication, vital for trade and security. The European Union has become a maritime actor, carrying out counter-piracy and maritime capacity-building operations and actively dealing with maritime safety, fisheries protection, port security, maritime surveillance and counter-immigration at sea. The Union's policies, mechanisms and activities related to the maritime domain are now backed by a Maritime Security Strategy, adopted by the Council in June 2014. This cutting edge book accounts for the trends in maritime strategy and seapower politics as well as the recent developments in the field, both at the conceptual and practical level. It discusses the significance of the maritime domain for European security in general and for the EU in particular. Readers are provided with the necessary tools to critically assess the EU's potential as a global maritime actor and evaluate why Europe's prosperity and security rests on its capacity to shape events at sea.

This book provides an overview of contemporary trends and challenges in maritime energy management (MEM). Coordinated action is necessary to achieve a low carbon and energy-efficient maritime future, and MEM is the prevailing framework aimed at reducing greenhouse gas emissions resulting from maritime industry activities. The book familiarizes readers with the status quo in the field, and paves the way for finding solutions to perceived challenges. The 34 contributions cover six important aspects: regulatory framework; energy-efficient ship design; energy efficient ship and port operation; economic and social dimensions; alternative fuels and wind-assisted ship propulsion; and marine renewable energy. This pioneering work is intended for researchers and academics as well as practitioners and policymakers involved in this important field.
