DC Motor EMI Suppression - X2Y Attenuators

DC Motors generally produce a lot of noise in an electrical
system due to the excessive amount of EMI and RFI they
generate. Some DC motors are designed with EMI in mind by

X2Y® Chip Carrier for DC Motors

X2Y® improves performance, component reduction and cost savings in an electronic applications. X2Y® components deliver a leap forward in circuit performance versus ordinary multi-layer ceramic capacitors (MLCCs). In EMI Filtering we deliver dramatic reduction of conducted and radiated noise to meet Electro-magnetic Compatibility requirements.

X2Y as an EMI filter for brushed DC motor

DC Motor Design with X2Y® Technology A. X2Y® is a four terminal device. The terminals are identified as A, B, G1 and G2 (left Figure 1). A and B are connected across the power leads and G1 and G2 are attached to ground (right Figure 1). (For DC motors, ground would be the motor housing.) Figure 1. X2Y® made of ceramic (left).

conversion. X2Y® components reduce EMI emissions far better than unbalanced discrete shunt capacitors or series inductive filters. Differential signal loss is determined by the cut off frequency of the single line-to-ground (Y) capacitor value of an X2Y®. X2Y® FILTER & DECOUPLING CAPACITORS

It's not perfect though because EMI will still leak through the plastic end-cap; so you can't use it as a substitution for component-based EMC suppression. Conclusion. EMC is an important field in electronics with strict regulations, and DC motors and their circuits are significant sources of EMI.

The most efficient way to silence the EMI is to use a ferrite core (semi-flattened cylinder or donut torus core) with both power leads to the motor separated and each having its wires wound around it (at least a few turns or more to form a common mode transformer).
