"This book examines the basic ideas that underpin the design and remodelling of interior space, from the establishment of a relationship between the existing building and the new components that inhabit it, to the careful positioning and design of significant elements within the space. The book will propose a method of analysis, understanding and exploitation of the existing building that can be used to realise the design of a new insertion."--Note de l'éditeur.

"Drawing relies on a clear vision. It also requires thought which, in, turn, builds understanding. Drawing cannot be detached from seeing and thinking about the fundamental nature of the subject matter being represented. The knowledge and understanding gained through drawing from life directly enhances our ability to draw from the imagination. Just as thought can be put into words, ideas can be made visible in a drawing to promote visual thinking and further stimulate the imagination. Once what is seen or imagined is made visible in a drawing, the image takes on a life of its own and communicates graphically. However eloquently or crudely, all drawings, speak to the eye."
