Proceedings of SPIE present the original research papers presented at SPIE conferences and other high-quality conferences in the broad-ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

The Nag Hammadi Scriptures, edited by Marvin Meyer, is the most complete, up-to-date, one-volume, English-language edition of the renowned library of Gnostic manuscripts discovered in Egypt in 1945, which rivaled the Dead Sea Scrolls find in significance. It includes the Gospel of Thomas, the Gospel of Mary, and the recently discovered Gospel of Judas, as well as other Gnostic gospels and sacred texts. This volume also includes introductory essays, notes, tables, glossary, index, etc. to help the reader understand the context and contemporary significance of these texts which have shed new light on early Christianity and ancient thought. The compilation of ancient manuscripts that constitute The Nag Hammadi Scriptures is a discovery that challenges everything we thought we knew about the early Christian church, ancient Judaism, and Greco-Roman religions.

This notebook is ideal for college and personal purposes because it has 64 ruled pages that let you store everything you want. Can be used in the office as a diary or journal. A cute cover will motivate you to work on your project or your homework! The notebook can be used by adults as much as by kids. Journal has 6" x 9" ruled pages. Check my other notebooks;)

This book constitutes the refereed proceedings of the 8th International Conference on Web Reasoning and Rule Systems, RR 2014, held in Athens, Greece in September 2014. The 9 full papers, 9 technical communications and 5 poster presentations presented together with 3 invited talks, 3 doctoral consortial papers were carefully reviewed and selected from 33 submissions. The conference covers a wide range of the following: semantic Web, rule and ontology languages, and related logics, reasoning, querying, searching and optimization, incompleteness, inconsistency and uncertainty, non-monotonic, common sense, and closed-world reasoning for the web, dynamic information, stream reasoning and complex event processing, decision making, planning, and intelligent agents, machine learning, knowledge extraction and information retrieval, data management, data integration and reasoning on the web of data, ontology-based data access, system descriptions, applications and experiences.

In this insightful book, you'll learn from the best data practitioners in the field just how wide-ranging -- and beautiful -- working with data can be. Join 39 contributors as they explain how they developed simple and elegant solutions on projects ranging from the Mars lander to a Radiohead video. With Beautiful Data, you will: Explore the opportunities and challenges involved in working with the vast number of datasets made available by the Web Learn how to visualize trends in urban crime, using maps and data mashups Discover the challenges of designing a data processing system that works within the constraints of space travel Learn how crowdsourcing and transparency have combined to advance the state of drug research Understand how new data can automatically trigger alerts when it matches or overlaps pre-existing data Learn about the massive infrastructure required to create, capture, and process DNA data That's only small sample of what you'll find in Beautiful Data. For anyone who handles data, this is a truly fascinating book. Contributors include: Nathan Yau Jonathan Follett and Matt Holm J.M. This book is the first to treat the chemistry of superheavy elements, including important related nuclear aspects, as a self contained topic. It is written for those – students and novices -- who begin to work and those who are working in this fascinating and challenging field of the heaviest and superheavy elements, for their lecturers, their advisers and for the practicing scientists in the field – chemists and physicists - as the most complete source of reference about our today's knowledge of the chemistry of transactinides and superheavy elements. However, besides a number of very detailed discussions for the experts this book shall also provide interesting and easy to read material for teachers who are interested in this subject, for those chemists and physicists who are not experts in the field and for our interested fellow scientists in

adjacent fields. Special emphasis is laid on an extensive coverage of the original literature in the reference part of each of the eight chapters to facilitate further and deeper studies of specific aspects. The index for each chapter should provide help to easily find a desired topic and to use this book as a convenient source to get fast access to a desired topic. Superheavy elements – chemical elements which are much heavier than those which we know of from our daily life – are a persistent dream in human minds and the kernel of science fiction literature for about a century.

This is a very timely book. The coverage it gives to the topic is superb. The individual, organisational and institutional causes of corruption are laid out along with analyses of the choices that we all have to make to deal with its consequences. In these times of increased scouting of corporate behaviour, there is something to learn here for policy makers, corporate leaders and researchers alike. Paul Sparrow, Lancaster University, UK Ronald Burke and Cary Cooper have assembled the most comprehensive volume of work available today on the topic of organizational corruption. However, the volume is far-reaching in more than just its content. In addition to attracting some of the most widely-read scholars in the area, Burke and Cooper have found space for a number of bright new voices and thus, insights as well. This makes for a volume that is as vibrant and exciting as it is complete. Scholars not only should read it, they will enjoy doing so. Marshall Schminke, University of Central Florida, US Corruption in organizations is creating an increasing number of victims and causing huge costs. This timely book brings together international researchers who address the causes and consequences of corruption in organizations and the action needed to reduce levels of corruption worldwide. Corruption is a worldwide problem and is likely to increase as a result of the current economic meltdown. Specific attention is devoted to causes of corruption such as individual levels of moral development, moral disengagement, greed, the routinisation of corruption, and organizational factors such as conflicts of interest, reward systems and organizational cultural values. The Companion suggests methods and examples to reduce levels of corruption that include education and training, whistleblowing, the increase of organizational controls through rules and structure, and developing an ethical organizational culture. Academics and postgraduate students interested in both crime and corruption in organizations will warmly welcome the Companion. Policymakers in government, those involved in professional services such as accountants and lawyers, as well as managers of any organization interested in conducting ethical business will find the Companion invaluable.
