excel - Benchmarking VBA Code - Stack Overflow

Code: Sub Range_Variable_Example() Range("A2:B10").Select End Sub. Run the code, and it will select the mentioned cells. This is obvious, isn't it, but imagine the scenario of using the same range in the long VBA project let's say hundred times, writing the same code of "Range("A2:A10") 100 times will take some time, but instead we will declare the variable and assign the data ...

For a computer, making 1000 changes is no different from making 10, so there is an economy of scale here with larger documents and problems, and that is where VBA can really shine and save you time. Macros and the Visual Basic Editor

Getting started with VBA in Office | Microsoft Docs

The custom format to show number in thousand or in million is simple: #,##0,"k". #,##0,"M". The "k" or "M" is optional, depend on whether you want to show it in the header or in the figure itself. The trick is to put 1 comma and 2 comma at the end of the format setting (#,##0) for "thousand" and "million" respectively.

Show number in thousand (k) or in million (M) by using ...

Format truncates format to 257 characters.. If you try to format a number without specifying format, Format provides functionality similar to the Str function, although it is internationally aware. However, positive numbers formatted as strings using Format don't include a leading space reserved for the sign of the value; those converted using Str retain the leading space.

Format function (Visual Basic for Applications ...
