THE EVALUATION OF FINANCIAL RISK PROFILE OF THE COMPANIES AND THE MANDATORY DISCLOSURE ON LIQUIDITY AND CREDIT RISK is a work born from a careful study of the evolution of the Italian and European legislation on the subject of financial risk communication and in particular of IFRS 7, Financial Instruments: Disclosure. Thanks to this international accounting standard, Italian listed companies have included a greater number of disclosures on financial risks in their financial statements, but while there is no doubt the quantitative increase in information, the qualitative value of this communication is doubtful. In this regard, the study analyzes the usefulness of the disclosure introduced by IFRS 7 for financial analysts. The choice of analysts is a natural choice due to the importance they hold as intermediaries in the communication channel between companies and the market.

From home mortgages to i-phones, basic elements of our daily lives depend on international economic markets. The astonishing complexity of these exchanges may seem ungoverned. Yet the global economy remains deeply bound by rules. Far from the staid world of treaties and state-to-state diplomacy, economic governance increasingly relies on a different class of international market regulation - soft law - comprised of voluntary standards, best practices, and recommended guidance created by a motley assortment of international organizations. Voluntary Disruptions argues that international soft law is deeply political, shaping the winners and losers of globalization. Some observers focus on soft law's potential to solve problems and coordinate market participants. Voluntary Disruptions widens the discussion, shifting attention to the ways soft law provides new political resources to some groups while not to others and alters the sites of contestation and the actors who participate in them. Highlighting two mechanisms - legitimacy claims and arena expansion - the book explains how soft law, typically viewed as limited by its voluntary nature, disrupts and transforms the politics of economic governance. Using financial regulation as its laboratory, Voluntary Disruptions explains the remarkable pre-crisis alignment of US and European approaches to governing markets, the rise and prominence of transnational industry associations in the 1990s and 2000s, and the ambivalence of US reforms towards international market cooperation in the wake of the 2008 financial crisis. Rethinking scholarly and policy approaches to international soft law, this volume answers enduring and pressing questions about global finance, International Relations, and power. Transformations in Governance is a major new academic book series from Oxford University Press. It is designed to accommodate the impressive growth of research in comparative politics, international relations, public policy, federalism, and environmental and urban studies concerned with the dispersion of authority from central states to supranational institutions, subnational governments, and public-private networks. It brings together work that advances our understanding of the organization, causes, and consequences of multilevel and complex governance. The series is selective, containing annually a small number of books of exceptionally high quality by leading and emerging scholars. The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina, Chapel Hill, and Walter Mattli of the University of Oxford.
