The probability of this event has already been evaluated and can be written as follows, $P[A_j + A_k] = (j+k)/m = j/m + k/m$ This can also be written as $P[A_j + A_k] = P[A_j] + P[A_k]$ Therefore, the probability of the combined event is the sum of the probabilities that are associated with groups j and k . If the outcomes of the experiment were to fall into several such
