Biopsychosocial Model This document provides more information about what the biopsychosocial approach is - we also utilise this across all of our work.

Biopsychosocial Model and... | NHS Physical Health ...

Abstract. The biopsychosocial model has dominated research and theory in health psychology. This article expands the biopsychosocial model by applying systems theories proposed by developmental scholars, including Bronfenbrenner's ecological models and Sameroff's transactional model, as well as contemporary philosophical work on dynamic systems. The proposed dynamic biopsychosocial model construes human health as a product of the reciprocal influences of biological, psychological ...

Health psychology claims that illness can result from a combination of biological, psychological, and social which reflects the biopsychosocial model of health and illness (Naidoo & Wills, 2008). It was introduced by George Engel in 1977.

Health Psychology And The Biopsychosocial Model

The biopsychosocial model views health and illness behaviors as products of biological characteristics (such as genes), behavioral factors (such as lifestyle, stress, and health beliefs), and social conditions (such as cultural influences, family relationships, and social support). Health psychologists work with healthcare professionals and patients to help people deal with the psychological and emotional aspects of health and illness.

Introduction to Health Psychology | Boundless Psychology

According to the biopsychosocial model, it is the deep interrelation of all three factors (biological, psychological, social) that leads to a given outcome—each component on its own is insufficient to lead definitively to health or illness. The psychological component of the biopsychosocial model seeks to find a psychological foundation for a particular symptom or array of symptoms (e.g., impulsivity, irritability, overwhelming sadness, etc.).

The Biopsychosocial Model of Health and Illness

The biopsychosocial model, (BPS for short) is an interdisciplinary model which claims that the health and well-being of a person depends upon a range of factors: biological factors, psychological factors, and social factors.
