CM212/CM304 - HCI Lecture Notes

- User interface, design is a subset of a field of study called human-computer interaction (HCI).
- Human-computer interaction is the study, planning, and design of how people and computers work together so that a person's needs are satisfied in the most effective way.
- HCI designers must consider a variety of factors:

process – General framework – The action cycle and causes of error – Standards, rules and principles. 2. Definition and Related fields.

"Human-computer interaction is a discipline concerned with the design, evaluation and implementation of interactive computing systems for human use and with the study of major phenomena surrounding them."

HCI Lecture 1: Principles

This lecture's key point(s): There are four basic interaction tasks: position, text, select, quantify. These may be performed using various hardware and software devices which are themselves categorised according to their properties and potential.
