thinkers on key philosophical questions about the nature of the self and the purpose of life, in a contemporary tour that includes the perspectives of such figures as Derek Parfit, David Wiggins, and Bernard Williams. By the author of *Zeno and the Tortoise*.

The work of the great philosophers of the past is well known. From Aristotle and Plato to Kant and Wittgenstein, the answers to life's biggest questions have been discussed and debated endlessly. But, as philosophy itself teaches, there is never a final solution to a philosophical problem. In the search for higher meaning, Nicholas Fearn has traveled the globe to interview the world's most distinguished thinkers, from Derek Parfit, David Wiggins, and Bernard Williams, to Donald Davidson, Richard Rorty, and Bernard-Henri Lévi. Philosophy is a brilliant and compelling guide to the

Arguably the oldest book in the Bible, the book of Job has a surprising amount to say about some of the newest scientific discoveries and controversies. Far from a book that is just about suffering, Job is filled with rich insight into both ancient and modern questions about the formation of the world the difference between animals and humans cosmology dinosaurs and the fossil record how to care for creation and more With careful consideration and exegesis, internationally known astrophysicist and Christian apologist Hugh Ross adds yet another compelling argument to the case for the veracity of the biblical commentary on the history of the universe, Earth, life, and humanity. Hidden Treasures in the Book of Job shows that the Bible is an accurate predictor of scientific discoveries and a trustworthy source of scientific information, and that both the book of Scripture and the book of

The question about whether the Universe is guiding our lives has remained a mystery throughout all the ages. While scientific explorations have enabled us to venture far into space, we have come to recognize a vastness that is well beyond our human imagination. In spite of these enormous achievements, we have not come upon other life outside our small planet Earth. As the only known life-supporting planet in the universe discovered thus far, we should consider ourselves as unique and even special. This then raises the question whether we are the creation of a divine plan and if we are meant to serve a greater purpose. While we are limited to recognizing a physical world that exists around us, this book looks beyond the physical and into the possibility of a spiritual existence

Bookmark File PDF Latest Answers To The Oldest Questions A Philosophical

within the universe. Much of the world's population believes in a higher being, a divine creator, a God. This very idea provides us with a spiritual foundation from which we can venture into the silent, but by no means, lifeless realm of the universe. While we may be unaware of our purpose for being here with any degree of certainty, it should not deter us from attempting to explore this issue. By assuming that we each have a purpose to fulfill, should we be curious to know who out there determines this for each of us? How are we guided along this path and what is our connection with these unseen forces? The author attempts to explore this mystery based on both past and current practices within society. By sharing from his own unique life's experiences, he points to a possible spiritual intervention in our own daily lives. While certainly not everyone may agree with the author's assumptions, it should,

For those who don't know the difference between Lucretius's spear and Hume's fork, Zeno and the Tortoise explains not just who each philosopher was and what he thought, but exactly how he came to think in the way he did. Nicholas Fearn presents philosophy as a collection of tools — the tricks of a trade that, in the end, might just be all tricks, each to be fruitfully applied to a variety of everyday predicaments. In a witty and engaging style that incorporates everything from Sting to cell phones to Bill Gates, Fearn demystifies the ways of thought that have shaped and inspired humanity — among many others, the Socratic method, Descartes's use of doubt, Bentham's theory of utilitarianism, Rousseau's social contract, and, of course, the concept of common sense. Along the

way, there are fascinating biographical snippets about the philosophers themselves: the story of Thales falling down a well while studying the stars, and of Socrates being told by a face-reader that his was the face of a monster who was capable of any crime. Written in twenty-five short chapters, each readable during the journey to work, *Zeno and the Tortoise* is the ideal course in intellectual self-defense. Acute, often irreverent, but always authoritative, this is a unique introduction to the ideas that have shaped us all. "Entertaining and witty. A smooth, sweet concoction that should tickle the taste buds of the most philosophic readers." — Julian Boggini, *The Times Educational Supplement* (U.K.) "A concise and entertaining attempt to place the skills of philosophy at our fingertips." — Olivier Burckhardt, *The Independent on Sunday* (U.K.)

If science has replaced God, is life necessarily meaningless? This book argues that the advances of science and the retreat of religion in secular society does not have to mean a life without spirituality.

Specialist scientific fields are developing at incredibly swift speeds, but what can they really tell us about how the universe began and how we as humans evolved to play such a dominant role on Earth? John Hands' extraordinarily ambitious book merges scientific knowledge from multiple disciplines and evaluates without bias or preconception all the theories and evidence about the origin and evolution of matter, consciousness, and mankind. The result, a "pearl of dialectical reasoning" (Publishers Weekly, starred review), provides the most comprehensive account yet of current

ideas such as cosmic inflation, dark energy, the selfish gene, and neurogenetic determinism. In the clearest possible prose it differentiates the firmly established from the speculative and examines the claims of various fields to approach a unified theory of everything. In doing so it challenges the orthodox consensus in those branches of cosmology, biology, and neuroscience that have ossified into dogma. Its “shocking and invigorating” analysis (Daily Telegraph, A Best Science Book of 2015) reveals underlying patterns of cooperation, complexification, and convergence that lead to the unique emergence in humans of a self-reflective consciousness that enables us to determine our future evolution. This groundbreaking book is destined to become a classic of scientific thinking.
