Mechanics and Materials Lecture Notes. This note provides an introduction to the mechanics of solids with applications to science and engineering. It emphasizes the three essential features of all mechanics analyses, namely: (a) the geometry of the motion and/or deformation of the structure, and conditions of geometric fit, (b) the forces on and within structures and assemblages; and (c) the physical aspects of the structural system which quantify relations between the forces and ...

Abstract The course "Engineering Mechanics" is held for students of the Master Programme "Materials Science and Engineering" at the Faculty of Engineering of the Christian Albrechts University in Kiel. It addresses continuum mechanics of solids as the theoretical background for establishing mathematical models of engineering problems.
