Lubricants And Additives

LUBRICANTS Polymers are made of long chain molecules of varying sizes and distributions. These polymers tend to be:

- § Relatively viscous above their melt temperature
- § “Sticky” above their melt temperature

Lubricants serve to decrease the frictional forces found between :

- § Polymer : Polymer
- § Polymer : Metal

Lubricants And Additives

One important application for polymers is in crankcase lubricants, in which various specialty polymers and copolymers are used as viscosity modifiers, dispersants, and pour-point depressants. These polymers give an oil all-season properties and are the most effective additives in producing multigrade oils.
