"An astonishing book revealing the cause and successful treatment for the plague of illnesses affecting western civilization; including obesity, heart attacks, depression, diabetes, strokes, headaches, chronic fatigue, and many more. In Dr. Starr's description of Type 2 Hypothyroidism, he presents overwhelming evidence showing a majority of Americans suffer this illness, which is due to environmental and hereditary factors. Laboratory testing used to diagnose hypothyroidism is completely inadequate, and current treatment for hypothyroidism is ineffective. Groundbreaking research shows how persistent environmental toxins prevent thyroid and other hormones from working properly. This book will lead you to understanding more about your health than anything you have ever read. Many of the more recent patients who have sought help from Dr. Starr have come to him with Hashimoto's and Graves' diseases. As a result, the updated 2011 version

The Third Edition of this popular book brings up to date the material that so many readers found helpful in the previous editions. The text has been revised and reorganized with current chapters focusing on the history of cortisol use, sources of confusion regarding cortisol therapy, the significance of normal adrenocortical function, generally accepted uses of physiological dosage, viral infections, miscellaneous clinical conditions, and future directions for research and therapy. The author provides explanation and confirmation of the rationale for the effectiveness and safety of the uses of physiological dosages of cortisol in the treatment, not only of patients with rheumatoid arthritis and other autoimmune disorders, but also of patients with chronic allergies, chronic fatigue syndrome, gonadal dysfunction, infertility, shingles, acne,

hirsutism, respiratory infections, and other less common disorders. It is a known fact that the influenza virus attacks the human body by impairing the production of the adrenocorticotrophic hormone (ACTH), which, in turn, impairs the production of cortisol; the only hormone that is absolutely essential for life. In addition, within the past two years, a new infection has developed in central China and has been labeled Severe Acute Respiratory Syndrome (SARS). The ACTH hormone and the SARS epidemic is addressed, and it is hoped that this type of cortisol therapy will not only be helpful in the treatment of the various disorders mentioned but will lead to a better understanding of the factors that contribute to the development of these disorders and ultimately contribute towards their prevention.

Hypothyroidism is the most common thyroid disorder and it is significantly more frequent than presented - millions of people suffer from this disease without knowing it. People with this condition will have symptoms associated with slow metabolism. Estimates of subclinical hypothyroidism range between 3 to 8 %, increasing with age, whereas it more likely affects women than men. About 10% of women may have some degree of thyroid hormone deficiency. Hypothyroidism may affect lipid metabolism, neurological diseases or other clinical conditions. The book includes studies on advancements in diagnosis, regulation and replacement therapy, thyroid ultrasonography and radioiodine therapy for hypothyroidism.
