features are hydrocephalus, which may be severe enough to cause cephalopelvic disproportion during labour, and vomiting. Differences from the pattern of disease seen in older children include a high incidence of teratoma and a predominance of tumours in supratentorial sites.² Many neonatal

Neonatal tumours - BMJ

Neonatal tumors are often benign.

Malignant tumors in neonates represent only 2% of all malignancies in childhood.

Some tumors that appear histologically malignant may show benign behavior, whereas apparently benign tumors may be fatal by virtue of their site of origin, which makes neonatal tumors one of the most difficult diagnostic and therapeutic challenges in the neonatal units.

of tumours in this period, with an estimated incidence of 0.61 per 100 000 live births. 2-5 The prognosis of neuroblastoma is influenced by many factors, the most important of which are age and degree of tumour spread.

Neonatal neuroblastoma | ADC Fetal & Neonatal Edition

The most common brain tumor that was present or produced symptoms at birth was teratoma. In this series of congenital tumors, teratomas occurred over 5 times more frequently than the second most common type, astrocytoma. They were often immature because of primitive neural elements and, rarely, a component of mixed malignant germ cell tumors.
