Answer. Here $u=72 \text{ km/hr} =$
 $72 \times 1000 / 3600 \text{ m/s} = 20$
 $72 \times 1000 / 3600 \text{ m / s} = 20 \text{ m/s}$, $v=0$. $a= -5$
 m/s^2 . Now using the relation.
 $v^2 = u^2 + 2as$ $v^2 = u^2 + 2 a s$.
 $0 = (20)^2 + 2 \times (-5) \times s$ $0 = (20)^2 +$
 $2 \times (-5) \times s$. $s=40 \text{ m}$ $s = 40 \text{ m}$.

Whenever a student decides to prepare for any examination, her/his first and foremost curiosity is about the type of questions that he/she has to face. We feel great pleasure to present this book before you. We have made an attempt to provide Chapter wise Numerical Response Questions for JEE Main as per NTA latest pattern with answer and solutions to majority of questions. Solutions to the questions are not just sketch rather have been written in such a manner that the students will be able to understand the application of concept and can answer some other related questions too. The use of mathematical modeling in engineering allows for a significant reduction of material costs associated with design,

production, and operation of technical objects, but it is important for an engineer to use the available computational approaches in modeling correctly. Taking into account the level of modern computer technology, this new volume explains how an engineer should properly define the physical and mathematical problem statement, choose the computational approach, and solve the problem by proven reliable computational approach using computer and software applications during the solution of a particular problem. This work is the result of years of the authors' research and experience in the fields of power and rocket engineering where they put into practice the methods of

Mathematical modeling shown in this valuable volume. The examples in the book are based on two approaches. The first approach involves the use of the relatively simple mathematical system MathCad. The second one involves the solving of problems using Intel Visual Fortran compiler with IMSL Libraries. The use of other software packages (Maple, MathLab, Mathematica) or compilers (C, C++, Visual Basic) for code is equally acceptable in the solution of the problems given in the book. Intended for professors and instructors, scientific researchers, students, and industry professionals, the book will help readers to choose the most appropriate mathematical modeling method

to solve engineering problems, and the authors also include methods that allow for the solving of nonmathematical problems as mathematical problems.

This mathematical reference for theoretical physics employs common techniques and concepts to link classical and modern physics. It provides the necessary mathematics to solve most of the problems. Topics include the vibrating string, linear vector spaces, the potential equation, problems of diffusion and attenuation, probability and stochastic processes, and much more. 1972 edition.
