The human eye is the organ which gives us the sense of sight, allowing us to observe and learn more about the surrounding world than we do with any of the other four senses.

We use our eyes in almost every activity we perform, whether reading, working, watching television,

Ocular Anatomy

And Physiology

Our eyes allow us to visualize the world around us. They do this by converting light waves into neural signals so that our brains can process them. The eye itself is shaped like a sphere that is elongated horizontally, as opposed to being perfectly round, and only the anterior one-sixth of the eye is
