In these essays, 24 of our most celebrated professors of philosophy address the problem of how to teach philosophy today: how to make philosophy interesting and relevant; how to bring classic texts to life; how to serve all students; and how to align philosophy with more "practical" pursuits. Selected and introduced by three leaders in the world of philosophical education, the insights contained in this inspiring collection illuminate the challenges and possibilities of teaching the academy's oldest discipline.

This handbook for educators and parents discusses the need to include philosophy in the elementary classroom. The authors point out that as a question-raising discipline, philosophy is appropriate to guide children's natural inquisitiveness through the educational process. It encourages intellectual resourcefulness and flexibility which can enable children and teachers alike to cope with the disconnectedness and fragmentation of existing curricula. It can help develop sound reasoning and ethics. The first six chapters discuss reasons for including philosophy in the curriculum, aims and objectives of the philosophy for children program, and methods of teaching and guiding philosophical discussions. The point is made that children frequently are not satisfied with simplified answers to their questions, and that their minds should be trained at an early, receptive age to consider metaphysical, moral, and logical issues. Chapter seven presents an argument for the use of formal and nonformal logic in teaching children to think constructively and learning to make inferences and deductions on their own. In chapter eight, the authors explore the following question: can moral education be divorced from philosophical education? The interrelationship of logic and morality indicates that the answer is no. See SO 009 951 for a philosophical reader for junior high students. (Author/AV)

Transformative approaches to teaching and learning have become ubiquitous in education today. Researchers, practitioners and commentators alike often claim that a truly worthwhile education should transform learners in a profound and enduring way. But what exactly does it mean to be so transformed? What should teachers be transforming students into? Should they really attempt to transform students at all? The Transformative Classroom engages with these questions left open by the vast discussion of transformative education, providing a synthetic overview and critique of some of the most influential approaches today. In doing so, the book offers a new theory of transformative education that focuses on awakening and facilitating students' aspiration. Drawing on important insights from ethics, psychology, and the philosophy of education, the book provides both conceptual clarity and concrete practical guidance to teachers who hope to create a transformative classroom. This book will be of great interest for academics, K-12 teachers, researchers and students in the fields of curriculum and instruction, teaching and learning, adult education, social justice education, educational theory and philosophy of education.

The contributors to this volume describe a range of programs that use picture books to teach philosophy to diverse audiences. From a pre-school program in which college students to do the teaching to a program focused on overcoming the legacy of violence and genocide in Mali in which the teachers write and illustrate their own picture books, the authors demonstrate the impact that learning philosophy has on diverse communities of young students and their teachers.

The approach is to consider the classroom as a unique happening of philosophy, different than reporting theories or doing research, through which a distinctive mode of philosophical formation can occur.
