Probability and Statistics are not the same either. They are related, but much more circuitously than as Hooke ' s Law (above) relates stress with strain. Probability can be viewed either as the long-run frequency of occurrence or as a measure of the plausibility of an event given incomplete knowledge – but not both.

One of the main differences between the
courses is the path through probability.
Probability and Statistics includes the
classical treatment of probability as it is in
the earlier versions of the OLI Statistics
course, while Statistical Reasoning gives a
more abbreviated treatment of probability,
using it primarily to set up the inference unit
that follows it.

Probability and statistics in any many engineering fields are applicable to the testing and reliability assessment of engineered systems. There are many phenomena in engineering that cannot be accurately modeled computationally, and will require testing in order to predict its performance. This includes fatigue, for example.
