AutoCAD is the most widely used computer-aided design package in the world. Underneath AutoCAD is a powerful computing language called AutoLISP. This language is designed to automate many functions of AutoCAD. This book is a hands-on introduction to AutoLISP and its applications. AutoLISP is a unique and powerful language that allows you to write, debug, and modify programs extremely quickly, once you understand how the language itself works. Part I contains an easy-to-learn pictorial representation for data and code, a tool used to easily solve problems otherwise approached through trial and error method. Essential AutoLISP is the only book in its field that uses the pictorial representation. Part II is devoted to learning how AutoLISP processes the code entered. Part V not only explains the causes of

most common error messages and how to solve them, but examines many other errors that don't necessarily give messages.

HOW DOES MAGIC HAPPEN? The Ogilvy advertising legend— “ one of the leading minds in the world of branding ” (NPR)—explores the art and science of conjuring irresistible products and ideas. "Sutherland, the legendary Vice Chairman of Ogilvy, uses his decades of experience to dissect human spending behavior in an insanely entertaining way. Alchemy combines scientific research with hilarious stories and case studies of campaigns for AmEx, Microsoft and the like. This is a must-read." —Entrepreneur ("Best Books of the Year") Why is Red Bull so popular, though everyone—everyone!—hates the taste? Humans are, in a word, irrational, basing decisions as much on subtle external signals (that little blue can) as on objective qualities (flavor, price, quality). The surrounding world, meanwhile, is irreducibly complex and random. This means future success can ' t be projected on any accounting spreadsheet. To strike gold, you must master the dark art and curious science of conjuring irresistible ideas: alchemy. Based on thirty years of field work inside the largest experiment in human behavior ever conceived—the forever-unfolding pageant of consumer capitalism—Alchemy, the revolutionary book by Ogilvy advertising legend Rory Sutherland, whose TED talks have been viewed nearly seven million times, decodes human behavior, blending leading-edge scientific research, absurdly entertaining storytelling, deep psychological insight, and practical case studies from his storied career working on campaigns for AmEx, Microsoft, and others. Heralded as “ one of the leading minds in the world of branding ” by NPR and "the don of modern advertising" by The Times, Sutherland is a unique thought leader, as comfortable exchanging ideas with Nobel Prize winners Daniel Kahneman and Richard Thaler (both interviewed in these pages) as he is crafting the next product launch. His unconventional and relentlessly curious approach has led him to discover that the most compelling secrets to human decision-making can be found in surprising places: What can honey bees teach us about creating a sustainable business? How could budget airlines show us how to market a healthcare system? Why is it better to be vaguely right than precisely wrong? What might soccer penalty kicks teach us about the dangers of risk-aversion? Better “ branding, ” Sutherland reveals, can also be employed not just to sell products, but to promote a variety of social aims, like getting people to pay taxes, improving public health outcomes, or encouraging more women to pursue careers in tech. Equally startling and profound, Sutherland ' s journey through the strange world of decision making is filled with astonishing lessons for all aspects of life and business.

Football is unquestionably the world ' s most popular and influential sport. There is no corner of the globe in which the game is not played or followed. More countries are affiliated to FIFA, football ' s governing body, than to the United Nations. The sport has therefore become an important component of our social, cultural, political and economic life. The Routledge Handbook of Football Studies is a landmark work of reference, going further than any other book in considering the historical and contemporary significance of football around the world. Written by a team of leading sport scholars, the book covers a broad range of disciplines from history, sociology, politics and business, to philosophy, law and media studies. The central section of the book examines key themes and issues in football studies, such as the World Cup and international competition, governance and ownership, fandom and celebrity. The concluding section offers in-depth surveys of the culture and organisation of

football in each of the regional confederations, from UEFA to CONCACAF. This book will be fascinating reading for any serious football fan and an essential resource for advanced students or scholars undertaking research in football or sport studies, and any practitioner or policy-maker working in football.

Complemented by a DVD that enables access to a total of six full-length practice exams, a reference for aspiring law students provides detailed explanations for every question, strategies for each section of the test, and comprehensive score reports. Original.

Featuring a blend of original research papers and comprehensive surveys from an international team of leading researchers in the thriving fields of foliation theory, holomorphic foliations, and birational geometry, this book presents the proceedings of the conference "Foliation Theory in Algebraic Geometry," hosted by the Simons Foundation in New York City in September 2013. Topics covered include: Fano and del Pezzo foliations; the cone theorem and rank one foliations; the structure of symmetric differentials on a smooth complex surface and a local structure theorem for closed symmetric differentials of rank two; an overview of lifting symmetric differentials from varieties with canonical singularities and the applications to the classification of AT bundles on singular varieties; an overview of the powerful theory of the variety of minimal rational tangents introduced by Hwang and Mok; recent examples of varieties which are hyperbolic and yet the Green-Griffiths locus is the whole of X ; and a classification of psuedoeffective codimension one distributions. Foliations play a fundamental role in algebraic geometry, for example in the proof of abundance for threefolds and to a solution of the Green-Griffiths conjecture for surfaces of general type with positive Segre class. The purpose of this volume is to foster communication and enable interactions between experts who work on holomorphic foliations and birational geometry, and to bring together leading researchers to demonstrate the powerful connection of ideas, methods, and goals shared by these two areas of study./div

The radical weekly newspaper or pamphlet was the leading print organ of popular radical expression during what has been called the "heroic age of popular Radicalism"; the public agitation for parlimentary reform between 1815 and 1820. This work reprints the original runs of the rarest periodicals.
