The Pythagorean Theorem or Pythagoras' Theorem is a formula relating the lengths of the three sides of a right triangle. If we take the length of the hypotenuse to be c and the length of the legs to be a and b then this theorem tells us that: $c^2 = a^2 + b^2$ Pythagorean Theorem states that

A short equation, Pythagorean Theorem can be written in the following manner: $a^2+b^2=c^2$. In Pythagorean Theorem, c is the triangle's longest side while b and a make up the other two sides. The longest side of the triangle in the Pythagorean Theorem is referred to as the 'hypotenuse'. Many people ask why Pythagorean Theorem is important.

... then the biggest square has the exact same area as the other two squares put together! It is called "Pythagoras' Theorem" and can be written in one short equation: $a^2 + b^2 = c^2$

Pythagoras Theorem - MATH

The Pythagorean Theorem states that the sum of the squared sides of a right triangle equals the length of the hypotenuse squared. You might recognize this theorem in the form of the Pythagorean equation: $a^2 + b^2 = c^2$. If you know the length of any 2 sides of a right triangle you can use the Pythagorean equation formula to find the length of the third side.

How to use the Pythagorean theorem. Input the two lengths that you have into the formula. For example, suppose you know $a = 4$, $b = 8$ and we want to find the length of the hypotenuse c .; After the values are put into the formula we have $4^2 + 8^2 = c^2$; Square each term to get $16 + 64 = c^2$; Combine like terms to get $80 = c^2$; Take the square root of both sides of the equation to get $c = 8.94$.

In mathematics, the Pythagorean theorem, also known as Pythagoras's theorem, is a fundamental relation in Euclidean geometry among the three sides of a right triangle. It states that the area of the square whose side is the hypotenuse (the side opposite the right angle) is equal to the sum of the areas of the squares on the other two sides. This theorem can be written as an equation relating the ...
