Computer-Based Technology for Special and Multicultural Education is a comprehensive textbook for integrating computer technology into the classroom. Experienced contributors discuss the growing role of technology in teaching students with exceptional learning needs. Unlike the competition, this textbook addresses classroom technology through multiple lenses: special and multicultural education. Special education teacher candidates, at all levels, will benefit from this in-depth coverage of history, terminology, and research in computer based technology. This background will help readers determine how and when to use technology for the most effective educational experience. Topics include using the combination of computer hardware and specific software programs to deliver evidence-based teaching strategies as supplemental instruction. Computer-Based Technology breaks down teaching methods by addressing the most critical academic areas: reading, writing, mathematics, S.T.E.M., and social studies. Authors acknowledge the differences in each academic area, and how to best incorporate technology into each of these classrooms. Authors use the term "exceptional learners" throughout the text, which describes not only special education students, but also the experience of students with culturally and linguistically diverse backgrounds. These students are faced with unique circumstances and challenges that affect their educational processes. Readers will learn how to use technology to enhance culturally relevant pedagogy, cooperative learning strategies, and the experience of English language learners. Key features: The latest recommendations for websites, mobile applications, and resources for classroom technologyStrategic plans for the most effective use of technology in the classroomIn-depth discussions of special education and multicultural learnersClassroom-specific approaches for technology in reading, writing, mathematics, S.T.E.M. and social studies

This book demonstrates how students in grades K through 3 can use technology tools in ways that support their learning and development. It provides detailed examples of activities, projects, and lessons which you can adapt to your own classroom. This book demonstrates how young students can use technology to create original work as an integral part of the teaching and learning process. These technology tools and activities will help your young students develop language and writing skills; learn how to observe, document, and organize; learn to communicate effectively; distinguish phonetic sounds; explore family and community; engage in cooperative learning; and much more. The technology tools described in this book support a constructivist, student centered classroom.

A comprehensive look at the promise and potential of online learning In our digital age, students have dramatically new learning needs and must be prepared for the idea economy of the future. In Getting Smart, well-known global education expert Tom Vander Ark examines the facets of educational innovation in the United States and abroad. Vander Ark makes a convincing case for a blend of online and onsite learning, shares inspiring stories of schools and programs that effectively offer "personal digital learning" opportunities, and discusses what we need to do to remake our schools into "smart schools." Examines the innovation-driven world, discusses how to combine online and onsite learning, and reviews "smart tools" for learning Investigates the lives of learning professionals, outlines the new employment bargain, examines online universities and "smart schools" Makes the case for smart capital, advocates for policies that create better learning, studies smart cultures

Innovation in building design and construction depends on innovative strategies being developed by teachers and practitioners, made available to students and then professionally adopted. Successful transfer of this knowledge relies on appropriate support for both students and academics to ensure the new knowledge is translated into a format appropriate to the learner's current state of understanding, often using a constructivist, student-centred learning approach. This special issue of the journal Architectural Engineering and Design Management examines new strategies to manage effectively a growing number of students and a changing student profile in the built environment sector. Written by international experts in the field, core themes covered include student-centred learning, practice-based learning, good practice and evaluation, and instructional systems design. Several papers are devoted to virtual learning, focusing on e-pedagogy, standardisation, bridging the gap between academia and industry, and virtual learning environments. This peer-reviewed publication will be invaluable reading for lecturers and students on architecture and civil engineering courses, professional architects and engineers, and all interested in T&L, continuing professional development and distance learning in the built environment sector.

Increase the achievement of every learner with Student Self-Assessment. In this practical guide, author Katie White outlines how to plan and implement various self-assessment strategies to ensure student growth at all grade levels. She covers every stage of the process--from setup to goal setting to celebrating. In each chapter, you'll find helpful step-by-step guidelines as well as questions to guide conversation and reflection throughout the journey. Understand how self-assessment skills benefit students now and in the future. Learn how to set up a self-assessment process and document learning. Train students to analyze and reflect on their own performance. Set strong, achievable goals in order to motivate students to realize their potential. Celebrate successes and continue to engage students with self-assessment. Contents: Introduction: Embracing Student Self-Assessment Chapter 1: Making a Compelling Case for Student Self-Assessment Chapter 2: Setting Up a Self-Assessment Process and Documenting Learning Chapter 3: Engaging in Analysis and Reflection Chapter 4: Imagining Possibilities and Setting Goals Chapter 5: Celebrating Growth Chapter 6: Examining Age, Security, Families, and Other Factors Epilogue Appendix: Sample Self-Assessment Sequence References and Resources Index

"The aim of this book is to bring together best practice in the development and use of E-Learning tools and technologies to support academic staff and faculty in universities, further education, and higher education institutes"--Provided by publisher.

These conference proceedings showcase a rich and practical exchange of approaches and vital evidence-based practices taking place around the world. They clarify the complex challenges involved in bringing about a holistic educational environment in schools and institutes of higher learning that fosters greater understanding and offer valuable insights on how to avoid the pitfalls that come with rolling out holistic approaches to education. To do so, the proceedings focus on the subthemes Support and Development, Mobility and Diversity and Networking and Collaboration in Holistic Education.

This market-leading text emphasizes future consumers of psychological research, uses real-world examples drawn from popular media, and develops students ' critical-thinking skills as they become systematic interrogators of information in their everyday lives.

How to rebuild higher education from the ground up for the twenty-first century. Higher education is in crisis. It is too expensive, ineffective, and impractical for many of the world's students. But how would you reinvent it for the twenty-first century--how would you build it from the ground up? Many have speculated about changing higher education, but Minerva has actually created a new kind of university program. Its founders raised the funding, assembled the team, devised the curriculum and pedagogy, recruited the students, hired the faculty, and implemented a bold vision of a new and improved higher education. This book explains that vision and how it is being realized. The Minerva curriculum focuses on " practical knowledge " (knowledge students can use to adapt to a changing world); its pedagogy is based on scientific research on learning; it uses a novel technology platform to deliver small seminars in real time; and it offers a hybrid residential model where students live together, rotating through seven cities around the world. Minerva equips students with the cognitive tools they need to succeed in the world after graduation, building the core competencies of critical thinking, creative thinking, effective communication, and effective interaction. The book offers readers both the story of this grand and sweeping idea and a blueprint for transforming higher education.

"In Remaking Literacy: Connecting ELA and Hands-On Making, author Jacie Maslyk transforms literacy teaching and learning by integrating maker education into the classroom. Maker education--an approach to instruction that emphasizes hands-on learning experiences--creates innovative opportunities that shape students into creative thinkers. Maslyk shares practical, research-based strategies for incorporating creativity and design thinking into literary instruction. By reading this book, K-5 educators will learn how to reimagine their classrooms so that students' learning will develop in engaging and visible ways"--
